

Requirements Elicitation Report

1. Introduction

This report presents the process and results of requirements elicitation for the **UCMS** system. The goal is to gather user needs and expectations to guide system design and development.

- **Project Name:** University Course Management System
 - **Date:** 21-4-2025
-

2. Scope

This report covers the elicitation and analysis of user requirements for UCMS, focusing on identifying functional needs, user expectations, and system features required to support academic activities within a university environment.

3. Stakeholders

The following stakeholders were involved in the requirements gathering process:

- Students
 - Faculty Members
 - Parents of students
-

4. Elicitation Techniques Used

The following techniques were used to collect requirements:

- Survey (Google Forms / Sheets)

5. Data Collection Summary

- **Total Responses:** 132
- **Stakeholder Distribution:**
 - Students: [98 / 74.7 %]
 - Doctors: [18 / 13.6%]
 - Parents: [16 / 12.1 %]

6. Data Analysis & Graphs

6.1 Student Analysis

Insights:

- Preference for fast and simple course registration
- Easy access to course materials
- Tracking academic progress and GPA
- Notifications for deadlines and assignments
- Better communication with instructors
- Desire for academic roadmap and scheduling support

6.2 Faculty Members Analysis

Faculty Members Analysis

Insight:

- Ability to send announcements to enrolled students
- Need for assignment and grading management tools
- Tracking student performance and engagement
- Interest in analytics and early detection of at-risk students
- Attendance tracking and communication tools

6.3 Parents Analysis

Insight:

- Monitoring student performance and grades
- Weekly progress reports
- Communication with faculty and administration
- Tracking behavior and academic progress
- Multilingual support (Arabic/English interface)

7. User Requirements (Raw Statements)

This section includes direct statements collected from users during the elicitation process. These statements reflect real user needs and expectations.

Students

- Weekly ungraded quizzes to assess understanding
- Academic roadmap for courses and curriculum structure
- Deadline reminders
- Ranking among students
- Easy communication with instructors
- Assignment notifications
- GPA tracking and academic progress visualization
- Internship and training opportunities
- Electronic university services to reduce paperwork
- Improved system responsiveness

Faculty Members

- Statistical analysis of student performance
- AI-based dashboard to identify at-risk students
- Smart scheduling system to avoid deadline conflicts
- Attendance tracking system
- Improved communication with students
- Weekly office-hour alternatives

Parents

- Subject-wise ranking of students
- Easy communication with faculty and administration
- Behavioral and academic monitoring
- Weekly reports
- Multilingual support
- Regular performance follow-ups

8. Key Findings

- Parents prioritize continuous weekly academic monitoring
 - Students prioritize usability, speed, and academic support tools
 - Faculty members prioritize analytics, automation, and student tracking systems
-

9. Challenges Faced

- Incomplete or inconsistent survey responses
 - Differences in expectations across stakeholder groups
 - Some vague or non-technical user requirements
-

10. Conclusion

The elicitation process successfully identified key functional and non-functional requirements for the UCMS system. These findings will directly support the system design and implementation phases, ensuring alignment with real user needs.
